PRODUCT SUMMARY

SKY65913-11: GNSS Low-Noise Amplifier Front-End Module with GPS/GLONASS/BDS Pre-Filters and Post-Filters

Applications

- Smartwatches
- Fitness/activity trackers
- Action cameras
- Personal navigation devices
- GPS/GLONASS/BDS radio receivers

Features

- Small signal gain: 15 dB
- In-band IIP3: –9 dBm
- Low noise figure: 1.8 dB
- Low current consumption
- Input/output impedance internally matched to 50 Ω
- Single DC supply: 1.62 to 3.3 V
- Minimum number of external SMT devices required
- Small MCM (10-pin, 2.5 x 2.5 mm) package (MSL3, 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to Skyworks Definition of Green™, document number SQ04–0074.

Description

The SKY65913-11 is a front-end module (FEM) with an integrated low-noise amplifier (LNA), and pre- and post-filters designed for Global Positioning System/Global Navigation Satellite System/Beidou Navigation Satellite System (GPS/GLONASS/BDS) receiver applications. The device provides high linearity, excellent gain, and a low noise figure (NF).

The pre- and post-filters provide low in-band insertion loss and excellent rejection for the cellular, PCS, and WLAN frequency bands.

The SKY65913-11 uses surface-mount technology (SMT) in the form of a 2.5 x 2.5 mm Multi-Chip Module (MCM) package, which allows for a highly manufacturable and low-cost solution.

A functional block diagram is shown in Figure 1.
